

1. WebDriver Installation and Integration in Eclipse.

→ Create new maven project

Pom.xml

```
<project xmlns="http://maven.apache.org/POM/4.0.0"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
https://maven.apache.org/xsd/maven-4.0.0.xsd">
  <modelVersion>4.0.0</modelVersion>
  <groupId>hello-selenium</groupId>
  <artifactId>hello-selenium</artifactId>
  <version>0.0.1-SNAPSHOT</version>
  <dependencies>
    <!--
https://mvnrepository.com/artifact/org.seleniumhq.selenium/selenium-java -->
    <dependency>
      <groupId>org.seleniumhq.selenium</groupId>
      <artifactId>selenium-java</artifactId>
      <version>4.10.0</version>
    </dependency>
    <!-- https://mvnrepository.com/artifact/org.seleniumhq.selenium/selenium-
chrome-driver -->
    <dependency>
      <groupId>org.seleniumhq.selenium</groupId>
      <artifactId>selenium-chrome-driver</artifactId>
      <version>4.10.0</version>
    </dependency>
  </dependencies>
</project>
```

HelloWorldSelenium.java

```
package com.ecommerce.test;

import org.openqa.selenium.*;
import org.openqa.selenium.chrome.ChromeDriver;
import org.openqa.selenium.firefox.FirefoxDriver;

public class HelloWorldSelenium {

    public static void main(String[] args) throws InterruptedException {

        // Basic configuration
        WebDriver driver = new ChromeDriver();
```

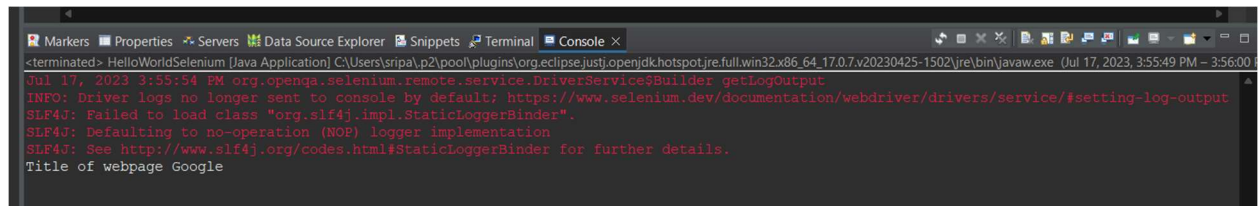

```
String baseUrl = "https://www.google.com";

driver.get(baseUrl);

System.out.println("Title of webpage "+driver.getTitle());

///
Thread.sleep(1000); // 1 ms
driver.close();
}
}
```

Output

The screenshot shows an IDE console window with the following output:

```
<terminated> HelloWorldSelenium [Java Application] C:\Users\sripa\p2\pool\plugins\org.eclipse.justi.openjdk.hotspot.jre.full.win32.x86_64.17.0.7.v20230425-1502\jre\bin\javaw.exe (Jul 17, 2023, 3:55:49 PM - 3:56:00 PM)
Jul 17, 2023 3:55:54 PM org.openqa.selenium.remote.service.DriverService$Builder getLogOutput

12.    <artifactId>selenium-java</artifactId>
13.    <version>4.10.0</version>
14.  </dependency>
15.  <!-- https://mvnrepository.com/artifact/org.seleniumhq.selenium/selenium-
       chrome-driver -->
16.  <dependency>
17.    <groupId>org.seleniumhq.selenium</groupId>
18.    <artifactId>selenium-chrome-driver</artifactId>
19.    <version>4.10.0</version>
20.  </dependency>
21.  </dependencies>
22. </project>
23.
```

LocateElementsDemo.java

```
package com.ecommerce.test;
import org.openqa.selenium.*;
import org.openqa.selenium.chrome.ChromeDriver;
//import org.openqa.selenium.firefox.FirefoxDriver;

public class LocateElementsDemo {

    public static void main(String[] args) throws InterruptedException {
        // Basic configuration
        WebDriver driver = new ChromeDriver();

        String baseUrl =
"https://accounts.google.com/signup/v2/createaccount?flowEntry=SignUp";

        driver.get(baseUrl);
```

```

WebElement firstNameTF = driver.findElement(By.id("firstName"));

//System.out.println("firstname text feild details "+firstNameTF);

firstNameTF.sendKeys("FirstName");
WebElement lastNameTF = driver.findElement(By.name("lastName"));

lastNameTF.sendKeys("LastName");
//Locate the button using class
WebElement nextButton = driver.findElement(By.className("VfPpkd-
vQzf8d"));

nextButton.click();

Thread.sleep(5000);
driver.close();

}
}

```

4. Handling Various Web Elements.

test.html

```
<html>
<head>
<title>Hello</title>
<script>
    function myDb1ClickFunction() {
        document.getElementById("demo-messages").textContent = "You
double clicked me!";
        document.getElementById("demo-messages").style.color = "red";
    }

    function mySglClickFunction() {
        document.getElementById("demo-messages").textContent = "You
single clicked me!";
        document.getElementById("demo-messages").style.color = "blue";
    }
</script>
</head>
<body bgcolor="#ffeeee">
    DEMO-MESSAGES:
    <span id="demo-messages">GETTING STARTED</span>

    <p id="xyz">Hello world!</p>
```

Alerts The simplest of these is referred to as an alert, which shows a custom message, and a single button which dismisses the alert, labelled in most browsers as OK. It can also be dismissed in most browsers by pressing the close button, but this will always do the same thing as the OK button.

```
<a href="javascript:alert('hello alerts!')">See an example alert</a>

<br>
<br>
<div id="modal">
    <iframe id="myframe" name="myframe"
        src="https://seleniumhq.github.io" width=1200 height=600>
    </iframe>
</div>

<br>
<br>

<button id="dblButton" ondblclick="myDb1ClickFunction()"
    onclick="mySglClickFunction()">Double-click me</button>

<h3>0 Some h3 text</h3>
<form>
    <input type="text" id="admin"> <br> <input type="text"
        id="admin123"> <br> <input type="text" id="adminxyz">
    <br> <input type="text" id="adm"> <br>
```

```

</form>
<h3>1 Some h3 text</h3>
<h3>2 Some h3 text</h3>
<h3>3 Some h3 text</h3>

<select multiple aria-label="Month" name="birthday_month" id="month"
  title="Month" class="_9407 _5dba _9hk6 _8esg">
  <option
    value="1">Jan</option>
  <option value="2">Feb</option>

7. Handling File Uploads.

- Needed to download AutoIt
- Choose file upload button in <https://demoqa.com/automation-practice-form>
- Then open AutoIt v3 in options choose freeze
- Then add below code to sciTE file

```
Local $hWnd=WinWait("[CLASS:#32770]", "", 10)

ControlFocus($hWnd, "", "Edit1")

Sleep(2000)

ControlSetText($hWnd, "", "Edit1", "D:\Testing\Screenshots\SS.jpg")

Sleep(2000)
ControlFocus($hWnd, "", "Button1")

ControlClick($hWnd, "", "Button1");
```

- And then convert this into exe file using compile script to exe

FileUploadUsingAutoITDemo.java

```
package com.ecommerce.test;

import java.io.IOException;

import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.WebElement;
import org.openqa.selenium.chrome.ChromeDriver;

public class FileUploadUsingAutoITDemo {

    public static void main(String[] args) throws Exception {
        // Basic configuration
        WebDriver driver = new ChromeDriver();

        demoFileUpload(driver);
    }

    static void demoFileUpload(WebDriver driver) throws
    InterruptedException, IOException {

```

Converting the project into TestNG and changing the run configuration

- In the Project Explorer, expand **SeleJenk**
- Right click on **SeleJenk** and choose **TestNG->convert to TestNG**

➤ **Running the project as Maven test**

- Right click on **SeleJenk**
- Click on **Run AS->Maven Test**

➤ **Installing Jenkins**

- Jenkins is already installed in your Practice lab.(Refer FSD: Lab Guide - Phase 5)
- Use the following commands to navigate to the above-mentioned directory.

```
cd /usr/share
```

```
ls
```

➤ **Adding Maven plugins to Jenkins**

- In the Jenkins dashboard, click on **Manage Jenkins**
- Click on **Manage Plugins**
- Select the **Available** tab, then find the **Maven Integration** plugin
- Click **Install** without restart

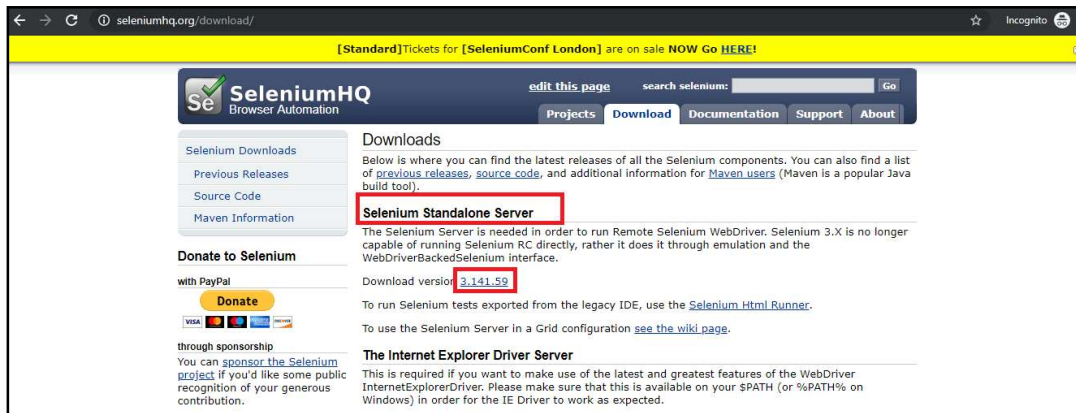

➤ **Adding the location of pom.xml in Jenkins CI Job**

- Click on **New Item** to create **CI Job**
- Select the **Maven project radio** button and enter **Item Name** as **SeleJenk**
- Click on **Build Environment**
- In **Root POM**, specify the location of pom.xml from your Eclipse workspace
- In **Goals and Options**, type **clean test**. Click on **Save**
- Click on the **SeleJenk** project page and click on the **Build Now** link

12. Set Up Selenium Grid.

Step 1: Setting up Selenium Grid hub

- a. Download Selenium standalone Server jar file from <https://www.seleniumhq.org/download/> link

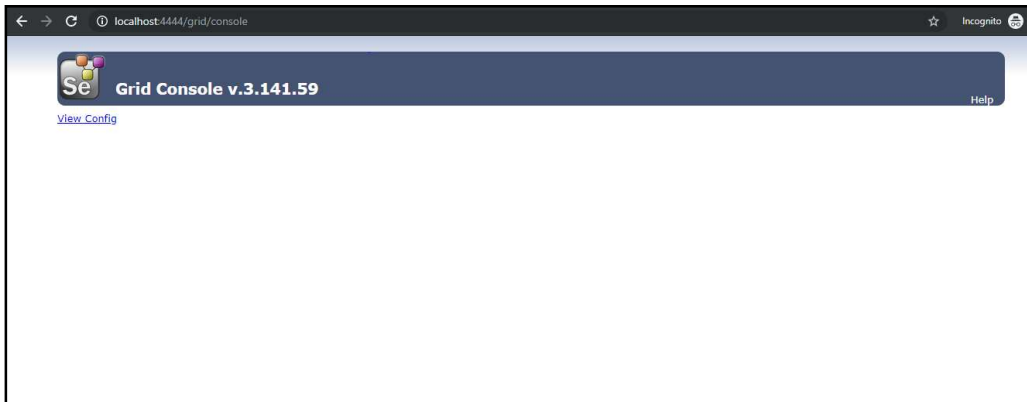

- b. Save it in a folder
- c. Go to command prompt
- d. Navigate to folder structure where you have saved the Selenium standalone Server jar file
- e. Type the below command in command prompt

Java -jar selenium-server-standalone-3.141.59.jar -role hub and click on **Enter** button

```
Command Prompt - java -jar selenium-server-standalone-3.141.59.jar -role hub
D:\Selenium Grid>java -jar selenium-server-standalone-3.141.59.jar -role hub
17:34:07.632 INFO [GridLauncherV3.parse] - Selenium server version: 3.141.59, revision: e82be7d358

17:34:08.841 INFO [Hub.start] - Selenium Grid hub is up and running
17:34:08.842 INFO [Hub.start] - Nodes should register to http://192.168.1.248:4444/grid/register/
17:34:08.843 INFO [Hub.start] - Clients should connect to http://192.168.1.248:4444/wd/hub
```

- f. Open the Chrome browser
- g. Enter URL as **http://localhost:4444/grid/console** and click on **Enter**
- h. Grid console page is loaded as below

Step 2: Setting up the Selenium Grid Nodes

- a. Once the Selenium Grid Hub is set up, the next step is to set up Selenium Grid nodes.
- b. Open the new command prompt
- c. Navigate to the folder structure where you have saved the Selenium standalone server jar file
- d. Type the below command in command prompt

java -jar selenium-server-standalone-3.141.59.jar -role node -hub

<http://localhost:4444/grid/register> and click on **Enter** button, which looks like

```
Command Prompt - java -jar selenium-server-standalone-3.141.59.jar -role node -hub http://localhost:4444/grid/register
Microsoft Windows [Version 10.0.17134.950]
(c) 2018 Microsoft Corporation. All rights reserved.

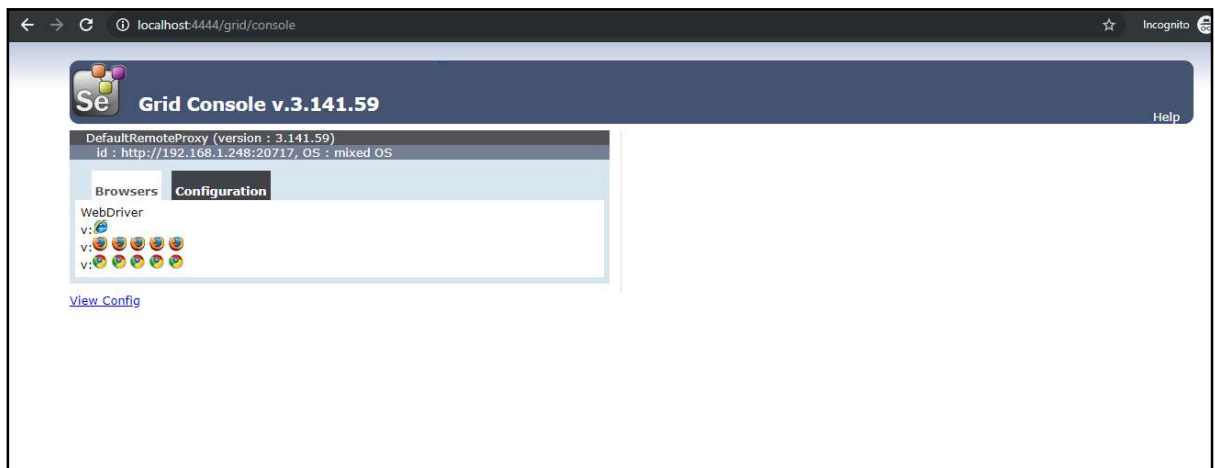

C:\Users\User>cd Selenium Grid

D:\>cd Selenium Grid

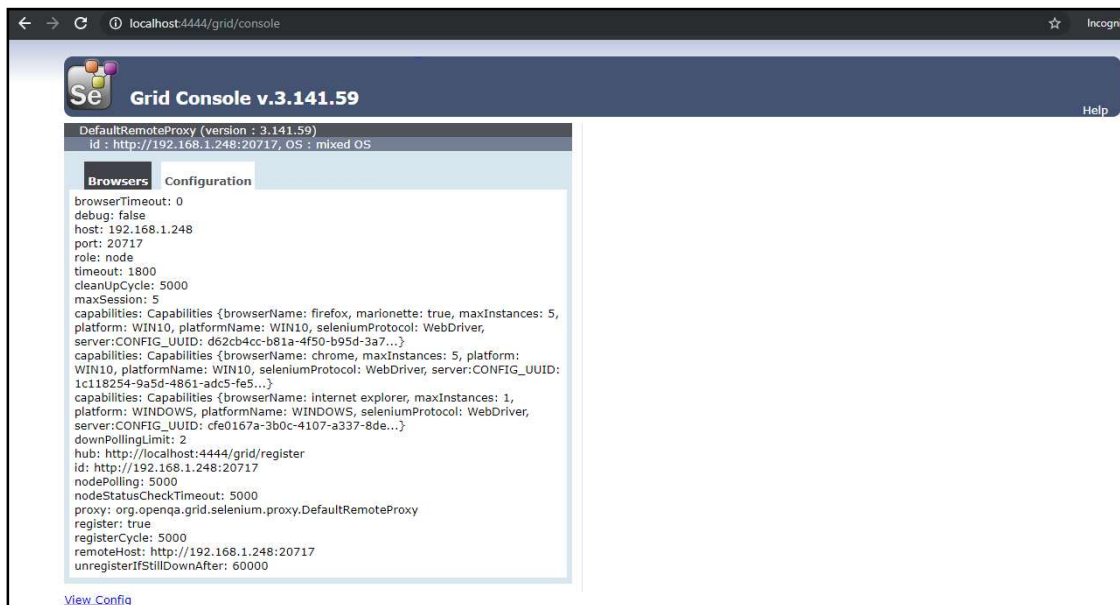

D:\Selenium Grid>java -jar selenium-server-standalone-3.141.59.jar -role node -hub http://localhost:4444/grid/register
17:54:25.329 INFO [GridLauncherV3.parse] - Selenium server version: 3.141.59, revision: e82be7d358

17:54:26.939 INFO [SelfRegisteringRemote$1.run] - Starting auto registration thread. Will try to register every 5000 ms.
17:54:30.868 INFO [SelfRegisteringRemote.registerToHub] - Registering the node to the hub: http://localhost:4444/grid/register
17:54:31.159 INFO [SelfRegisteringRemote.registerToHub] - The node is registered to the hub and ready to use
```

- e. Open the browser

- f. Enter URL as **http://localhost:4444/grid/console** and click on **Enter**
- g. Grid console page is loaded below, which shows **Browsers** by default

- h. Click on **Configuration**, which shows Configuration details

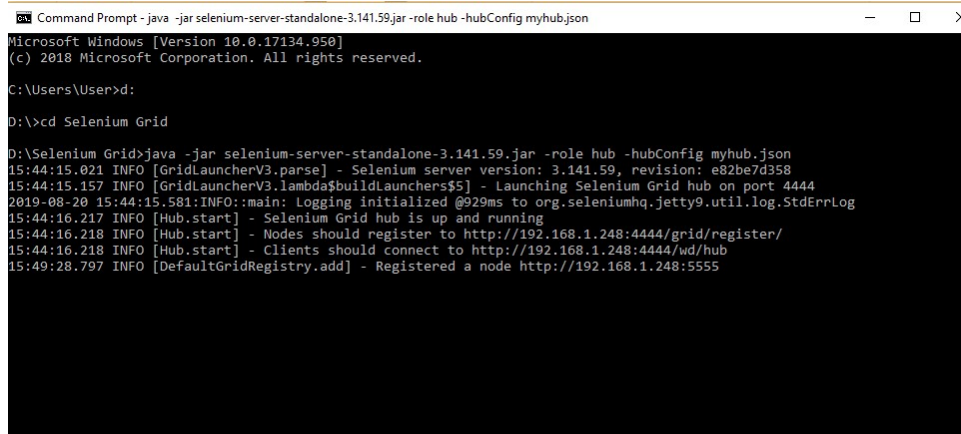

13. Grid Configuration Using JSON.

Step1: Configuring the grid hub using JSON

- Create JSON file for the hub which looks like

```
{
  "port": 4444,
  "newSessionWaitTimeout": -1,
  "servlets": [],
  "withoutServlets": [],
  "custom": {},
  "capabilityMatcher": "org.openqa.grid.internal.utils.DefaultCapabilityMatcher",
  "throwOnCapabilityNotPresent": true,
  "cleanUpCycle": 5000,
  "role": "hub",
  "debug": false,
  "browserTimeout": 0,
  "timeout": 1800
}
```

- Save it in a folder with a valid name (example: myhub) in which we have saved Selenium standalone Server jar file
- Go to command prompt
- Navigate to folder structure where you have saved the Selenium standalone Server jar file
- Type the below command in command prompt
- **Java -jar selenium-server-standalone-3.141.59.jar -role hub -hubConfig myhub.json** and click on **Enter** button, which looks like

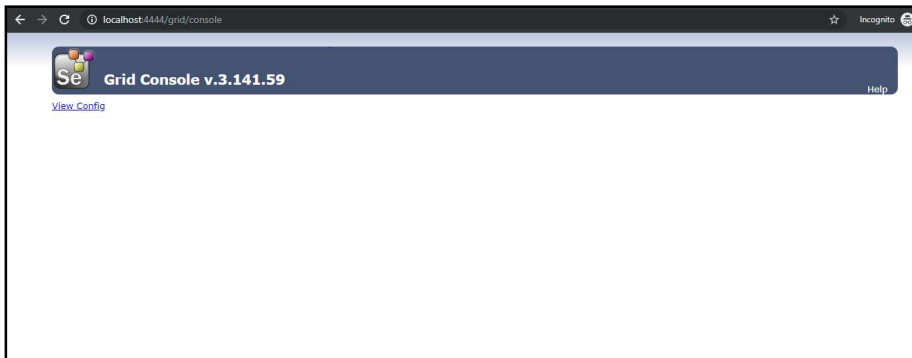

```
Command Prompt - java -jar selenium-server-standalone-3.141.59.jar -role hub -hubConfig myhub.json
Microsoft Windows [Version 10.0.17134.950]
(c) 2018 Microsoft Corporation. All rights reserved.

C:\Users\User>cd Selenium Grid

D:\Selenium Grid>java -jar selenium-server-standalone-3.141.59.jar -role hub -hubConfig myhub.json
15:44:15.021 INFO [GridLauncherV3.parse] - Selenium server version: 3.141.59, revision: e82be7d358
15:44:15.157 INFO [GridLauncherV3.lambda$buildLaunchers$5] - Launching Selenium Grid hub on port 4444
2019-08-20 15:44:15.581:INFO::main: Logging initialized @929ms to org.seleniumhq.jetty9.util.log.StdErrLog
15:44:16.217 INFO [Hub.start] - Selenium Grid hub is up and running
15:44:16.218 INFO [Hub.start] - Nodes should register to http://192.168.1.248:4444/grid/register/
15:44:16.218 INFO [Hub.start] - Clients should connect to http://192.168.1.248:4444/wd/hub
15:49:28.797 INFO [DefaultGridRegistry.add] - Registered a node http://192.168.1.248:5555
```

- Open the Chrome browser
- Enter URL as 'http://localhost:4444/grid/console' and click on enter

- Grid console page is loaded as below

Step 2: Configuring the grid nodes using JSON

- Once the Selenium Grid Hub using JSON is configured, the next step is to configure Selenium Grid nodes using JSON.
- Create JSON file for node, which looks like:

```
{
  "capabilities": [
    {
      "browserName": "firefox",
      "maxInstances": 5,
      "seleniumProtocol": "WebDriver"
    },
    {
      "browserName": "chrome",
      "maxInstances": 5,
      "seleniumProtocol": "WebDriver"
    }
  ],
  "proxy": "org.openqa.grid.selenium.proxy.DefaultRemoteProxy",
  "maxSession": 5,
  "port": 5555,
  "register": true,
  "registerCycle": 5000,
  "hub": "http://localhost:4444",
  "nodeStatusCheckTimeout": 5000,
  "nodePolling": 5000,
  "role": "node",
  "unregisterIfStillDownAfter": 60000,
  "downPollingLimit": 2,
  "debug": false,
  "servlets": [],
  "withoutServlets": [],
  "custom": {}
}
```

- Save it in a folder with a valid name (example: mynode) in which we have saved Selenium standalone Server jar file
- Open the new command prompt
- Navigate to the folder structure where you have saved the Selenium standalone server jar file
- Type the below command in command prompt
java -Dwebdriver.gecko.driver="geckodriver.exe" -Dwebdriver.chrome.driver="chromedriver.exe" -jar selenium-server-standalone-3.141.59.jar -role node -nodeConfig mynodes.json

and click on **Enter** button, which looks like

```

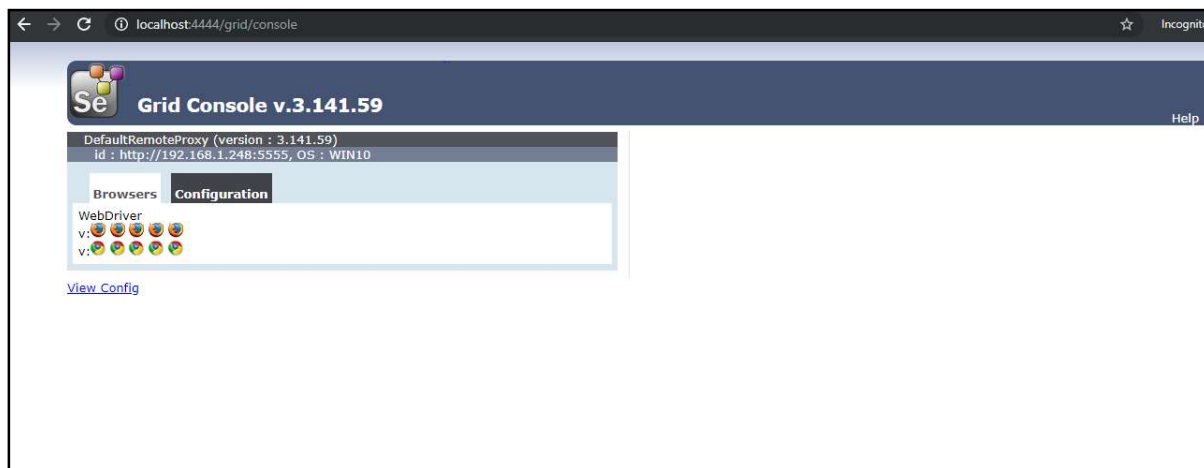

Command Prompt - java -Dwebdriver.gecko.driver="geckodriver.exe" -Dwebdriver.chrome.driver="chromedriver.exe" -jar selenium-server-standalone-3.141.59.jar -role node -nodeConfig mynodes.json
Microsoft Windows [Version 10.0.17134.950]
(c) 2018 Microsoft Corporation. All rights reserved.

C:\Users\User>d:

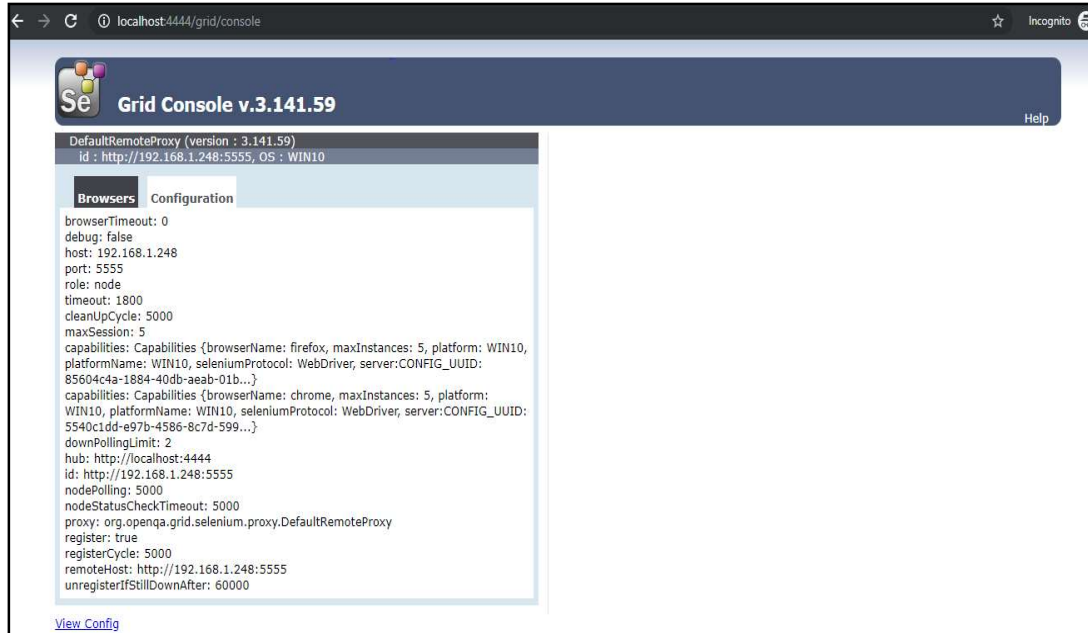

D:\>cd Selenium Grid

D:\Selenium Grid>java -Dwebdriver.gecko.driver="geckodriver.exe" -Dwebdriver.chrome.driver="chromedriver.exe" -jar selenium-server-standalone-3.141.59.jar -role node -nodeConfig mynodes.json
16:05:36.650 INFO [GridLauncherV3.parse] - Selenium server version: 3.141.59, revision: e82be7d358

16:05:37.959 INFO [SeleniumServer.boot] - Selenium Server is up and running on port 5555
16:05:37.959 INFO [GridLauncherV3.lambda$buildLaunchers$7] - Selenium Grid node is up and ready to register to the hub
16:05:38.225 INFO [SelfRegisteringRemote$1.run] - Starting auto registration thread. Will try to register every 5000 ms.
16:05:38.769 INFO [SelfRegisteringRemote.registerToHub] - Registering the node to the hub: http://localhost:4444/grid/register
16:05:38.992 INFO [SelfRegisteringRemote.registerToHub] - The node is registered to the hub and ready to use
  
```

- Open the browser
- Enter URL as **http://localhost:4444/grid/console** and click on **Enter**
- Grid console page is loaded, which shows **Browsers** by default

- Click on **Configuration** which shows Configuration details

The screenshot shows the Selenium Grid Console v.3.141.59 interface in an Incognito browser window. The address bar shows 'localhost:4444/grid/console'. The page has a dark blue header with the Selenium logo and 'Grid Console v.3.141.59'. Below the header, there's a section for 'DefaultRemoteProxy (version : 3.141.59)' with 'id : http://192.168.1.248:5555, OS : WIN10'. The main content area has two tabs: 'Browsers' and 'Configuration'. The 'Configuration' tab is active, displaying a list of configuration parameters. At the bottom left, there is a link 'View Config'.

DefaultRemoteProxy (version : 3.141.59)
id : http://192.168.1.248:5555, OS : WIN10

Browsers **Configuration**

browserTimeout: 0
debug: false

[View Config](#)

14. Running Tests on Selenium Grid.

Step 1: Running the Tests on Selenium grid

- Open Eclipse
- Click on **Package** and navigate to **New --> Class**
- Give a valid Class name (example: GridTest)
- Check the **public static void main** checkbox and click on **finish**, which will create a blank Java class
- Write the desired capabilities in the class, which looks like

```
package testing.sidTesting;

import org.openqa.selenium.Platform;
import org.openqa.selenium.remote.DesiredCapabilities;

public class GridTest {

    public static void main(String[] args) {
        DesiredCapabilities cap = new DesiredCapabilities();
        cap.setBrowserName("chrome");
        cap.setPlatform(Platform.WIN10);
    }
}
```

- Start the selenium grid hub in command prompt using **java -jar selenium-server-standalone-3.141.59.jar -role hub** command
- Start the selenium grid node in Command prompt using **java -Dwebdriver.chrome.driver="chromedriver.exe -jar selenium-server-standalone-3.141.59.jar -role node -hub <http://localhost:4444/grid/register>** command
- Go to eclipse and add a statement for remoteWebdriver, which has an implementation of WebDriver, should pass the hub port (http://192.168.1.248:4444/wd/hub), and DesiredCapabilities object as parameters

- Write Selenium code to open the browser and navigate to any web page (example: Google page)

```
import java.net.URL;

import org.openqa.selenium.Platform;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.remote.DesiredCapabilities;
import org.openqa.selenium.remote.RemoteWebDriver;

public class GridTest {

    public static void main(String[] args) throws MalformedURLException {
        DesiredCapabilities cap = new DesiredCapabilities();
        cap.setBrowserName("chrome");
        cap.setPlatform(Platform.WIN10);

        URL url = new URL("http://192.168.1.248:4444/wd/hub");
        WebDriver driver = new RemoteWebDriver(url, cap);

        driver.get("https://www.google.com");
        System.out.println("Google Title: " + driver.getTitle());

        driver.close();
    }
}
```

- Execute the Java program by right-clicking on the program and navigating to **Run As--> 1 Java Application**

- This is how it looks like in Eclipse console

```
Aug 21, 2019 5:14:13 PM org.openqa.selenium.remote.ProtocolHandshake createSession
INFO: Detected dialect: W3C
Google Title: Google
```

- We can see the capabilities passed through are displayed in both command prompts in server (hub) as well as in clients (node)
- Selenium grid hub in command prompt with desired capabilities looks like

```

C:\Windows\System32\cmd.exe - java -jar selenium-server-standalone-3.141.59-jar-role hub
Microsoft Windows [Version 10.0.17134.950]
