

Practice Project: Arithmetic Calculator

Writeup: -

Step 1: - START

Step 2: - Display the calculator interface to the user.

Step 3: - Ask the user to select an arithmetic operation (+, -, *, /) or
wants to Exit

Step 4: - Ask the user to input the first number.

Step 5: - Ask the user to input the second number.

Step 6: - If the user selects addition (+), add the two numbers together
and display the result.

Step 7: - If the user selects subtraction (-), subtract the second number
from the first number and display the result.

Step 8: - If the user selects multiplication (*), multiply the two numbers
together and display the result.

Step 9: - If the user selects division (/), divide the first number by the
second number and display the result.

Step 10: - Ask the user if they want to perform another calculation or
exit the program.

Step 11: - If the user wants to perform another calculation, go back to
step 2.

Step 12: - If the user wants to exit the program, end the program

Step 13: - STOP
